### DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

#### *Claim Rejections - 35 USC § 103*

Claims 1-3, 5-7, 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mani in view of Scheder, U.S. Patent 3,595,766.

The reference does not disclose addition of a buffer and regeneration of said buffer continuously and external to said electrodialysis stack.

The Scheder patent is cited to show the use of buffers to control the pH in an electrodialysis method, wherein said buffer is regenerated continuously and external to the electrodialysis stack (see figure 1 and abstract).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Mani patent with the teachings of the Scheder patent, because the Scheder patent teaches that buffers to control and maintain the pH within one pH unit (see example 2 in col. 4).

*Response to Arguments*

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
